

Mixware Hyper S firmware update process

1. Open any browser, go to <https://github.com/Mixwarebot/Hyper-S>.
We recommend using Google Explorer and Microsoft Edge.
2. You can view Hyper-S Cura configuration file, description document, firmware and other information in the browser.

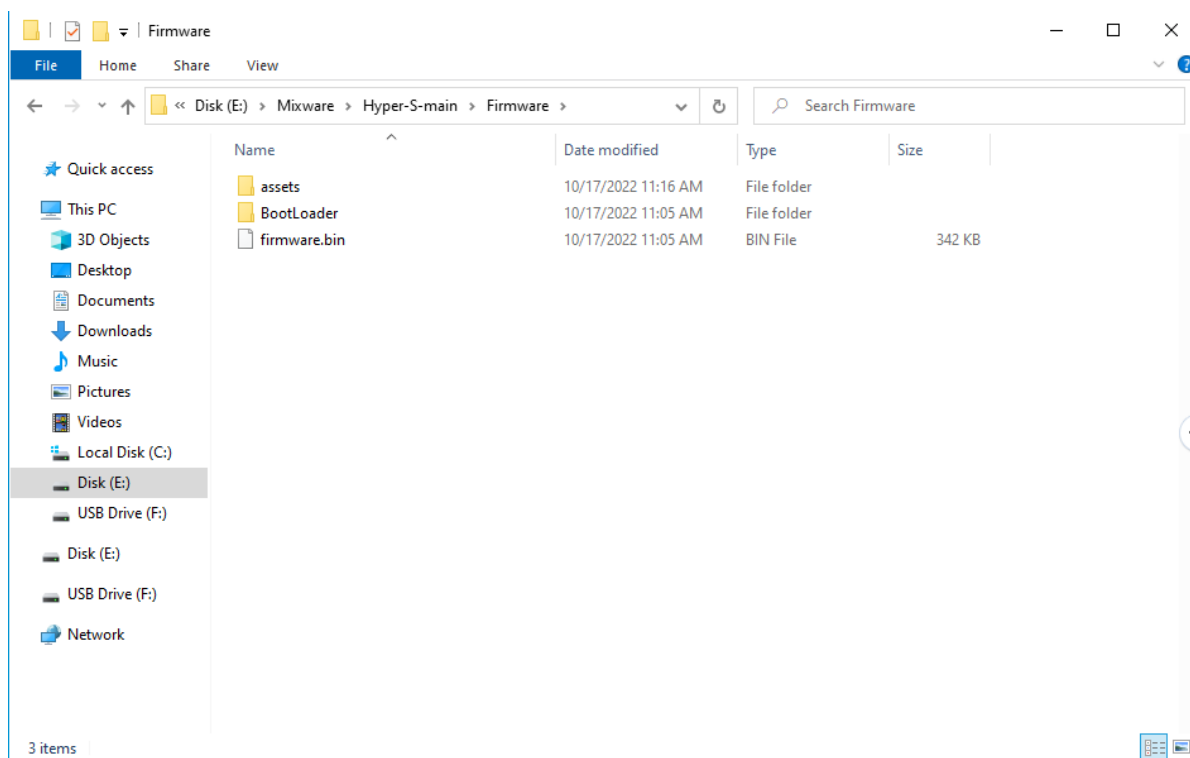

You can download the firmware as follows:

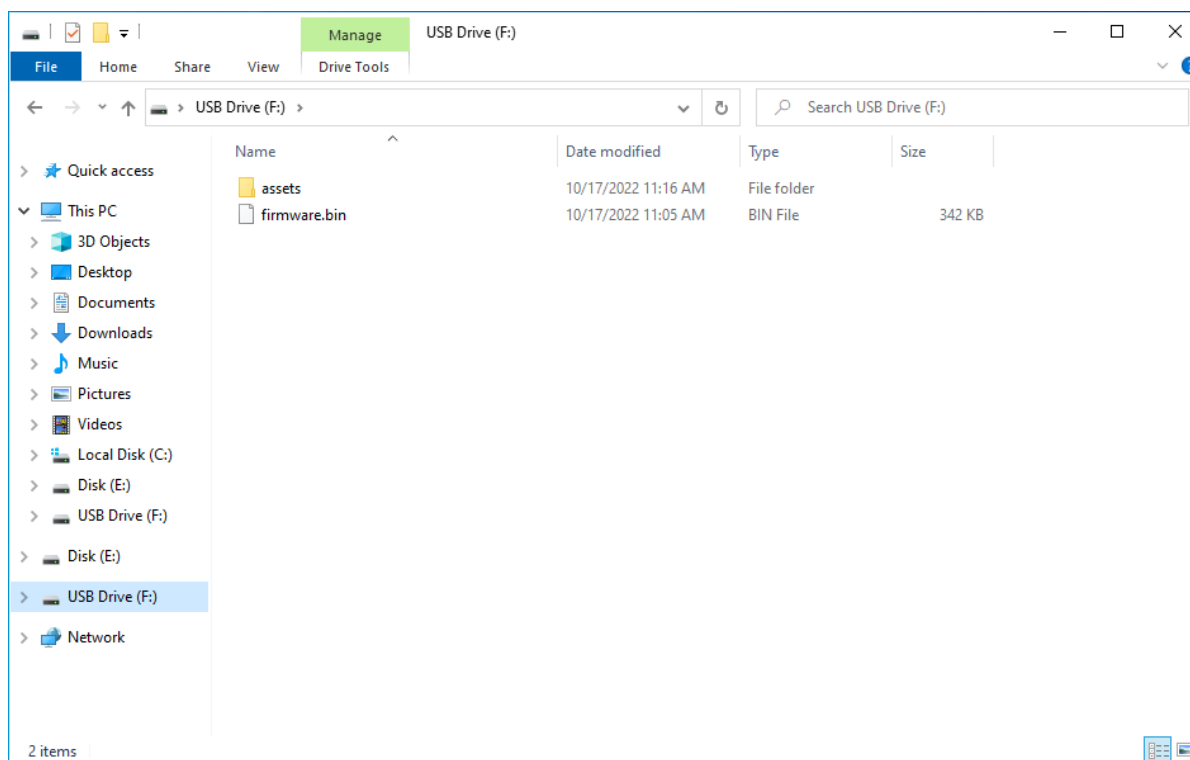

- 2.1. Click "Code" to expand the download mode;
 - 2.2. Click Download ZIP to download and pay attention to the saved directory information.
3. Decompress the Hyper-S-main.zip file that you just downloaded.

4. Open the Firmware directory in the Hyper-S-main directory.
"assets" is the Hyper-S UI resource file, and "firmware.bin" is the Hyper-S firmware.
Bootloader is the Bootloader firmware of Hyper-S.

5. Insert the U disk to be used to update the firmware into the computer.
6. Copy the contents of the "Firmware" directory to the root directory of the U disk. The effect of successful replication is as follows:

In general, you only need to copy "assets" and "firmware.bin" to update the firmware of Hyper-S.
For the "bootloader" update that requires additional professional electronic equipment, it is not explained here.

7. Eject the prepared U disk, so that you can better use the U disk

8. Insert the USB flash drive into the right side of the printer screen, then start the printer power and wait for the printer to execute the update program:

8.1. Firmware Update diagram:

8.2. UI resource file update diagram:

8.3. After the update is complete, you can go to Settings -> About to view the current version:
